

**CARBON
NEUTRAL**

Haute Couture Roses since 1996

From Kenya with love

Our Brand Story

Located in Ruiru, Kenya, Red Lands Roses was founded in the 1990s by visionary French agronomist Dr. Isabelle Henin Spindler. Inspired by Kenya's potential, she set out to grow luxury roses—sustainably.

Established in 1996, the farm sits at close to 2,000 meters altitude on 43 hectares of reclaimed land. Today, it flourishes with over 200 rose varieties—spray, garden, mini, and T-hybrids—all grown on a 100% hydroponic system.

Red Lands Roses is more than a flower farm; it's a hub of innovation, environmental stewardship, and community empowerment. With a team of 1000+, the farm has earned global recognition from UN Climate Neutral Now, One Carbon World, and Kenya Flower Council.

Every rose from Red Lands tells a story of elegance, care, and purpose.

Behind Every Rose, There Are People

Our People, Our Pride

- Over 1000+ employees, with 55% being women
- Many team members have grown their careers with us from the very start
- Free Daycare Center for up to 70 children (ages 3 months to 3 years), funded by sales from our Nairobi shop
- Education support: School fees covered for 2 children per employee until high school graduation
- Comprehensive health insurance for employees, spouses, and children, plus a fully-equipped on-site clinic
- Women empowerment programs promoting gender equality, access to contraception, and fighting FGM and GBV
- Mobility support: All employees receive a bicycle, replaced every 5 years
- Subsidized hot lunches, with the company covering 75% of the cost
- Fair wages: Salaries are 55% higher than Kenyan horticultural standards
- Maternity support: Paid time off for breastfeeding mothers

Beyond the Farm

- In partnership with the German Development Bank, raised KES 3 million for House of Mercy Children's Home
- Support goes toward school fees and basic needs for 65 children who are orphaned, abandoned, or living with HIV/AIDS or disabilities

Sustainability at a Glance

Did you know Kenyan-grown roses emit 5.5x fewer greenhouse gases than those grown in Europe—even after air transport? Thanks to our ideal climate at close to 2,000m elevation near the Equator, we grow our roses without artificial heating or lighting.

Red Lands Roses has been Carbon Neutral Certified since 2020—measuring, reducing, and offsetting emissions through sustainable forestry projects.

Our eco-conscious practices include;

- 100% hydroponic, soil-less cultivation with closed-loop fertigation
- Water recycling and treatment systems for every drop used
- Solar power meeting 30% of our energy needs
- Plastic-free packaging with recyclable paper sleeves and boxes
- Land use on non-arable soils, preserving food and pasture areas
- Tree planting and sheep lawn-mowers to maintain biodiversity

Wangari Maathai Rose: Named in honor of the late Nobel Laureate, we donate €0.06 per stem to the Green Belt Movement to support her legacy.

Our Certifications

Red Lands Roses is proudly recognized for sustainable, ethical, and transparent practices through the following certifications:

- **KFC Silver** - Ensures responsible flower production in line with Kenyan and global standards.
- **Carbon Neutral** - Certified by One Carbon World for reducing and offsetting emissions through eco-friendly practices.
- **MPS-ABC (Grade A)** - Tracks and improves our environmental impact in areas like energy, water, and waste.
- **Blue Company** - A corruption-free certification affirming our commitment to ethical business conduct.

Understand The Catalog

How to Use This Catalog

This catalog is designed to help you choose the best rose varieties based on your needs, with clear data and labels to guide your selection:

- “NEW” Sticker: Marks newly introduced varieties - ask us for samples!
- “RL3” Sticker: Highlights varieties from our Red Lands 3 expansion, available in larger quantities starting January 2025.

Key Variety Information Provided

- Botanical Category: Spray (multi-head) or T-Hybrid (single-head)
- Head Size: Average size at cut stage, based on the past year’s data
- Vase Life: Shown as a range (minimum to maximum) for better accuracy
- Length Profile: Average stem length per variety, useful for custom bouquet needs
